

At Arterran, we understand the effects of Green House Gases and the pollutants produced from burning coal.

We knew we had to be part of a solution that reduces or eliminates those pollutants. We did the hard work, the research and development, the trial and error and the many experiments to try and create a solution. After 8 years of dedicated work by some of the smartest and best people I have ever worked with, we had a solution. Arterran Advanced Fuel. The product from the Arterran Process is a drop-in replacement for the coal used to produce heat and electricity.

Take a little time out to explore Arterran's Website and learn about what we have done and our plans for the future. Feel free to get in touch.
